

A TESTED PORTFOLIO + A RISK-CONTROLLED AI ASSISTANT

Finly combines a market-tested base portfolio with an AI options assistant.

AI studies the market. Rules set the risk, build the trade, and can still stop it.

THE PROBLEM

A trading bot is hard to trust when one model can research, size, and send.

COMMON AGENT

FINLY

Useful AI judgment—without handing the model the account keys.

Finly's rules choose the maximum risk, the exact option pair, the order details, and whether a trade may be sent.

AI explains the opportunity. Rules decide whether money can move.

01 RESEARCH

Read market evidence

02 RISK RULES

Set the loss and build

03 FINAL CHECK

Send to Alpaca—or stop

The model may explain or veto. It cannot choose size or write the broker order.

TRY IT

Change the evidence and watch Finly decide whether to trade.

These are illustrative scenarios, not broker orders. The demo shows both rising- and falling-price cases. During the competition, the live account may open only a rise-focused options trade—or do nothing.

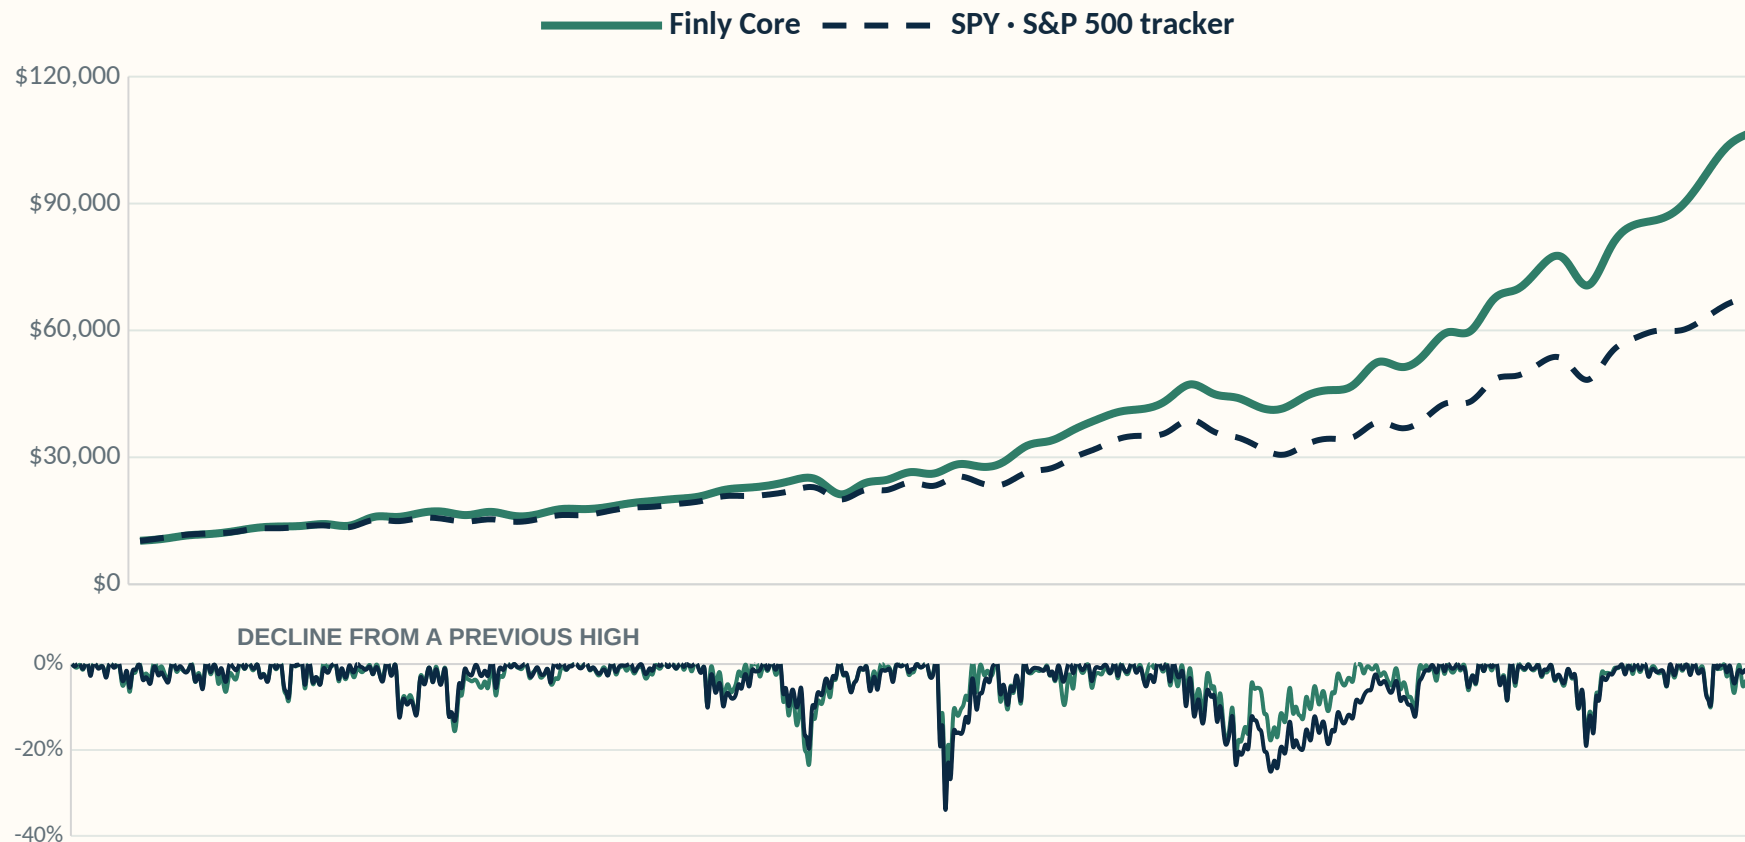

Evidence agrees See a supported case become a capped-loss proposal.	Evidence conflicts See Finly stop when the evidence conflicts.
---	--

EVIDENCE ANALYZED BY FINLY Market Trend Recent prices have been falling, and heavier trading gives modest support to that signal. Options Market More traders are paying to protect against a price drop. That supports a negative view, but not an extreme one. Economic Events An upcoming economic report raises the chance of weaker short-term growth.	DECISION PATH Finly reads the evidence as a falling-price view . It then builds a capped-loss trade and checks every term before preparing the paper order. <table><tr><td>WHAT FINLY SEES The market view AI compares the supplied information and explains why it supports—or weakens—the trade idea.</td><td>WHAT FINLY BUILDS A two-option trade with capped loss Code—not the language model—chooses the contracts, position size, possible gain, and maximum loss.</td></tr></table>	WHAT FINLY SEES The market view AI compares the supplied information and explains why it supports—or weakens—the trade idea.	WHAT FINLY BUILDS A two-option trade with capped loss Code—not the language model—chooses the contracts, position size, possible gain, and maximum loss.

EVIDENCE ANALYZED BY FINLY	DECISION PATH
Market Trend Price momentum remains positive.	Finly initially reads the evidence as an undecided market view , but the case falls apart under testing. Instead of forcing a trade, it keeps the account protected.
Options Market Options pricing is mildly positive.	
Economic Events	

Conflicting evidence → no trade → \$0 new options risk

Judge the live system—not the slide deck.

\$153.31 ahead after session one. Now try the decision demo and inspect the proof.
