THE PROBLEM

A trading bot is hard to trust when one model can research, size, and send.

COMMON AGENT

FINLY

Useful AI judgment—without handing the model the account keys.

Finly's rules choose the maximum risk, the exact option pair, the order details, and whether a trade may be sent.

Price sets the direction. AI explains the news. Rules control the money.

Three outcomes: bullish call spread · bearish put spread · no trade.

\$10,000 became \$106,711: \$38,629 ahead of SPY.

Historical rule: 50% QQQ + 50% across three trend-selected sectors. Competition deployment: 97% of those weights + 3% cash.

2013–2026 · same \$10,000 start · modeled 0.05% cost per buy or sell

An 80-year market test stayed ahead across all 21 tested monthly rebalance schedules.

Its worst decline was 16.31 percentage points smaller than the market proxy.

11 ordinary-quote windows cleared every alpha gate.

517 sampled SPY signal windows · 2016–2026 · five-session stride
