

FINLY

CONTROLLED-DELEGATION TRADING RESEARCH

We found $\uparrow 967.11\%$ - and refused to trade it.

In the consumed, post-selected 2013-01-02–2026-08-27 replay with modeled 5 bp one-way costs, G4 returned +967.11% versus SPY +580.82%. Finly rejected it because the statistical evidence did not earn authority.

Bruce Wen | Brandeis University | Alpaca AI Trading Agents Hackathon

The strongest retrospective return was the easiest claim to overtrust.

CONSUMED RETROSPECTIVE

♦967.11%

G4 MODELED TOTAL RETURN

SPY total return	+580.82%	HIST
Deflated Sharpe probability	3.75%	FAIL
Worst familywise p-value	37.18%	FAIL
Promotion decision	REJECTED	NO

Consumed 2013-01-02–2026-08-27 | post-selected replay | modeled 5 bp one-way costs | rejected and not promoted.

The return survived the replay; the claim did not survive the test.

WHAT THE REPLAY SAID

The chart looked exceptional.

In the consumed 2013-01-02–2026-08-27 replay, G4 returned +967.11% versus SPY +580.82% after modeled 5 bp one-way costs.

WHAT THE TESTS SAID

The evidence was not promotable.

G4 was selected after history was visible. Its Deflated Sharpe probability was 3.75%, while the worst familywise-adjusted p-value was 37.18%.

Finly kept the result visible, labeled its evidence class, and denied it authority.

The frozen policy was positive, risk-controlled — and did not beat SPY on return.

HISTORICAL RESULT / GOVERNANCE DECISION

A backtest returned +967.11%. Finly rejected it.

In the consumed, post-selected 2013-01-02–2026-08-27 retrospective replay with modeled 5 bp one-way costs, G4 returned +967.11% versus SPY +580.82%; promotion was rejected because the Deflated Sharpe probability was 3.75% and the worst familywise-adjusted p-value was 37.18%.

Follow the evidence

Test the authorization boundary

Finly's claim is not that a large backtest deserves belief. Its claim is that a

The larger result did not clear the statistical promotion gates.

REJECTED

This is a post-selected ETF replay, not options P&L, broker fills or evidence of future market superiority. The rejection is the result of the audit—not a footnote to it.

REGISTERED FUTURE-ONLY TESTS

A larger backtest never upgrades its own evidence class. Only a new test can.

Attempts 115 and 116 begin with zero outcomes - not borrowed confidence.

PUBLICLY REGISTERED

Two tests ask two different questions.

Attempt 115 freezes a downside-semivolatility challenger.
Attempt 116 freezes a variance-risk-premium shadow. Each has zero observed outcomes. Neither supports a performance claim.

GitHub records the registrations; it does not create outcome evidence, provider-origin proof, a broker fill, or future profitability.

authority.**

Finly makes correction, rejection, and NO_TRADE part of the product.

HISTORICAL SIGNAL

G4 returned +967.11% versus SPY +580.82%;
Finly rejected it after the DSR and multiplicity tests.

PRODUCTION TRUTH

V1 returned +15.39% at 5 bp with 8.12% volatility and -5.45% drawdown; SPY returned +33.52%.

AUTHORITY DESIGN

The model interprets evidence. Code owns exposure, order fields, and the final permit decision.

NEXT EVIDENCE

Attempts 115 and 116 are registered future-only tests with zero outcomes and no performance claim.

Publish the tempting result. Reject what has not earned authority. Make the next claim falsifiable.
